

EPIDEMIOLOGICAL EVIDENCE ON ASBESTOS

I. Selikoff, W. Nicholson and A. Langer

Mt. Sinai Hospital
New York, New York

Data on the human health effects from occupational and environmental exposure to asbestos will be presented with special emphasis on the role of different asbestos minerals. Further, human tissue burdens of fibers and their association with asbestos related diseases will be discussed. Experimental animal data from various species and utilizing different routes of administration will also be presented, again with emphasis on differing fiber types.
