

ROBERT HURTIN HALSEY, M. D.

121 EAST 60TH STREET

NEW YORK CITY

TELEPHONE REGENT 4-1920

April 19, 1939.

Dr. Robert A. Kehoe,  
Kettering Laboratory of Applied Physiology,  
Cincinnati, Ohio.

Dear Dr. Kehoe:

Your work on lead intoxication has interested me very much and I am prompted to ask if you have any knowledge of the pathology of the heart and blood vessels, which would tend to show that lead produces any actual disease of the blood vessels, or of the heart (muscle or valves).

I realize that many times arteriosclerosis is said to be caused by lead, and I have often sought for evidence that warrants such an assertion.

If you could help me in this matter, I should appreciate it very much.

With kindest regards, I am

Sincerely,

*Robert N. Halsey*
