Teck Operations & Projects in the U.S.

Company Overview & Presence in the U.S.

Teck is a diversified natural resource company and global sustainability leader with over 100 years of experience and major business units focused on steelmaking coal, copper, zinc and energy. Headquartered in Vancouver, Canada, we own, or have interest in, 12 mines in the United States, Canada, Chile and Peru and exploration projects around the world.

Teck has a significant economic presence in the U.S., including corporate offices in Anchorage, Alaska, and Spokane, Washington State.

We own the Red Dog Mine in northwest Alaska, which is one of the world's largest open-pit zinc mines and has been developed through a unique operating agreement with the land-owner NANA, a Regional Alaska Native corporation owned by the Inupiat people of northwest Alaska. Red Dog is the top employer in the region and a major source of economic activity, providing significant revenues for services in the region.

We also own Pend Oreille Operations, an underground zinc and lead mine in Washington State.

In addition to active mining operations, we own the Mesaba Copper-Nickel Development Project located in the Mesabi Iron Range Mining district of northern Minnesota.
