Heat resistant Gloves·Mittens·Hand Pads Coats·Aprons·Sleeves·Leggings

A-Best Products Company is now offering a new line of safety products made from THERMOBEST . . . a superior asbestos substitute because of its outstanding qualities:

- Thermobest is inherently flame resistant and will not support combustion, is self extinguishing, and does not melt.
- Thermobest has many of the heat protection qualities of asbestos.
- Thermobest is lightweight, soft, comfortable, exceptionally strong.
- Thermobest looks and feels like asbestos — But is Not.
- Thermobest withstands temperatures at a constant 650° F and intermittently higher temperatures.
- Thermobest contains "Kevlar 29" in a blend of other non-asbestos fibers to provide additional bulk and extra resistance to high heat and abrasion. ("Kevlar 29" is a trademark of DuPont Company.)

All A-Best Products are sold direct to industry through our own sales organization. Since our founding in 1935 we have specialized in the design and manufacturing of asbestos gloves and safety clothing to our customers' requirements. We believe you will find the new THERMOBEST line a money saver due to its long life . . . and that your employees will like these comfortable non-asbestos products. They have been proven in many high-performance field conditions.

THERMOBEST is a trademark of A-Best Products Company.
