GEORGE E. BEST
TECHNICAL DIRECTOR

March 20, 1970

To: PVC Resin Producers - Participants in
Epidemiologic Study (List attached)

Subject: Proposed Acroosteolysis Registry
and Consultation Center
Institute of Industrial Health
The University of Michigan
(Proposal No. ORA-70-1077-KB1)

Dear Sirs:

Presumably you are already aware that several possible lines of further research were considered on the acroosteolysis problem, but abandoned for the present in favor of continuing surveillance of industrial personnel.

Accordingly, Dr. Dinman has arranged for a proposal to be submitted, copy attached, the contract for one year for which would cost \$3,238. Subscribed funds remaining with MCA exceed this amount, hence no further assessment will be needed. Please so indicate on the accompanying reply sheet if you agree to having MCA execute the contract.

Please note, however, Section III of the proposal concerning Roentgenographic Consultation. Such service would not be covered under the contract, and companies making use of it would be billed directly (not through MCA) by the Department of Radiology.

Your prompt return of the reply sheet is urged in order that these arrangements can be completed if they are acceptable to all of the companies participating.

This letter also affords an opportunity to let you know that future staff surveillance will be shared with
