Subject: FW: Technical Review Committee Conference Call Summary

Patsy:

As we just discussed. I have not had time to comment on the document or the list of individuals yet, but as per today's discussion you already know about most of what is discussed here. For your information, I think Julian Preston would be a good addition to the Peer review committee and I will tell them so...

Have a safe trip.

Stuart

Subject: Technical Review Committee Conference Call Summary
Importance: High

To all,

Attached is the draft summary from yesterday's conference call. Since then I have also done a little digging to come up with some names for a Genetic Toxicologist and this is what I found.

Julian Preston (EPA) He is the head of the Environmental Carcinogenesis Division at EPA (Part of the National Health Effects and Environmental Research Laboratory which is under ORD), and was formerly head of a department at CIIT and previous to that, at Oak Ridge. He is a world-class cytogeneticist.

Ray Tice (Integrated Laboratory Systems) Also a world-class cytogeneticist, he was formerly at Brookhaven. ILS is a contract lab located in RTP, NC doing a lot of work for NIEHS.

Regards,

George
