Subject: Status of Liver Function Testing - 2/15/74

Avon Lake General Chemical

All employees who desired (567) have received the SMA-12. The results have been reviewed by medical management and are being made known to the employees. 50 tested show abnormal T. Bili. 30-40% show abnormal SGOT. Others show L.D.H. and Alk. Phos. Based on current medical thought, retests will be scheduled in 30 days.

ALTC

Scheduled to begin the SMA-12 on 3/5/74. Opportunity will be given to all employees at the Technical Center to participate. Plans are to complete the testing by the end of March.

Calvert City

Started testing on 2/12/74. SMA-12 on 10% completed (50 EDC production men). No abnormalities reported. Completed tests on 26 EDC maintenance men yesterday - no report yet. Will complete testing in the plant within 2 months.

Henry

One-half way through initial testing on all personnel in the plant. Will complete in 2 weeks. SMA-12 on 112 employees tested show no abnormalities.

Long Beach

Essentially completed testing entire plant population. No results as yet. Should have results next week. SMA-12 being used.

Pedricktown

One-half way through testing entire plant using SMA-12. Of 105 tested, 26 show liver abnormalities. Testing should be completed by 2/22/74 with the results back to the plant by 3/1/74.
