R. F. Garnsworthy - Melbourne Telex AA 30298

Regarding PCB questions raised in the Western Australian Government proceedings of November 24, I suggest Monsanto make no comment unless specifically requested to do so.

Regarding question 4, studies do show lower chlorinated isomers more degradable than higher. There is evidence that all eventually degrade, therefore cannot be classified as totally indestructible.

Regarding question 5, ingestion of large amounts of PCB's result in acne, nausea, loss of appetite, headache, etc. commonly associated with chlorinated hydrocarbons. Enlarged livers could result from prolonged exposure at high levels.
