Subject: EIA: Wind, solar provided 10 percent of total U.S. power in March

By Esther Whieldon

06/14/2017 10:40 AM EDT

The wind and solar power installations provided about 10 percent of total U.S. electricity generation in March and likely exceeded that level in April, the U.S. Energy Information Administration said today.

However, that share will likely fall below those levels in the summer, largely because output fluctuates based on seasonal changes, EIA said.

Of the total March output from the two renewable sources, wind power provided about 80 percent of the electricity, EIA said.
