TO : J. R. Savage
Gen. Office

We find that there has been no violation of "Aroclor cars for Aroclor use only" by the W.G.K. Plant in regard to car ACFX 4367 and subject shipment to Allis Chalmers on 9/13/71. We do find however that this car was in customer control for excessive periods during the last two years. We do not know how they use the car internally while it is in their possession. The car was added to our aroclor fleet in May of 1969.

Prior to the trip to Allis Chalmers, the car was thoroughly washed and inspected. The car record is attached. It was again inspected by department supervision prior to loading, and no irregularity was noted. We are unable to account for the "acetic acid odor".

We do not agree with Mr. Benignus' data. However, we do agree with his concern related to customer satisfaction and will continue to exert every effort to insure plant compliance with aroclor special requirements.
