December 15, 1970

Dear Sir:

Again, I would like to ask for your cooperation in our effort to develope a low cost means of disposal of spent transformer askarel or capacitor Aroclor.

My recent letter requested the amount of liquid scrap material you expect to generate in 1971. We are now in the negotiation phase of this program and urgently need your input. We are asking the Rollins Purle Company to supply an industry quote for their incineration service.

Since we have a solution to liquid disposal our engineers are working on means for handling contaminated solid materials, i.e., insulation, rags, Fullers earth, failed capacitors, etc. We are designing a large kiln and accessory equipment for this purpose and plan to make it available to you.

With this thought in mind, I would also like to ask you to provide the amount and types of solid PCB contaminated materials you might wish to ship to Monsanto for disposal. This information will allow us to size the kiln.

Should you have no scrap, please let us have this information.

Many thanks for your help on this matter.

Cordially,

Randall Graham
Senior Fluids Specialist
