---

Dear Rosalinde

Please find enclosed an excellent debriefing of the meeting we had with Chemour. prepared by [REDACTED]. I see that you did not received it yet.

[REDACTED] confirmed that this issue is indeed a strategic research challenge mentioned on this year's AWP, however not covered by any topic:

*"Low or free platinum group metal (PGM) catalysts (including bioinspired catalysts), reducing critical (raw) materials use in electrolyzers and fuel cells, and safe and sustainable use of all material, including developing of perfluorosulfonic acid (PFAS)-free ionomers and membranes".*

For 2024, we are indeed discussing a topic on the subject with the industry – and counting on them to be on the process of drafting it as we speak.

Have a nice afternoon

[REDACTED]
