LOCATION: Portland

SUBJECT: Asbestos Fiber

You have each received a memo from Bill Lehnert along with a report from Gene O'Neill on a Gypsum Association meeting concerning the investigation of the hazards pertaining to the mixing and sanding of joint compounds. This report, coupled with our experience at Akron, would seem to point out that we need to take immediate steps to monitor all of our joint cement operations from the asbestos fiber standpoint and take whatever steps are necessary to get the fiber level in the air down to acceptable levels.
