Central Files

The following hazards were noted during an inspection of the Office Annex and Main Office stairways.

Location -- Office Annex South end stairs 1st to 2nd floor.

Hazards Noted:

1. Not enough light in stair well.
(Only 2 bulbs working in fixture at top landing - believe fixture will take 4 bulbs. Fixture may need relocating.)
2. Loose hand rail on west side of north/south run.

All other stairs in these two buildings appeared satisfactory to me.

I recommend the two hazards be corrected ASAP.
