Tigard, Oregon 97223

Dear Mr. Lehnert:

Our company furnishes expanded vermiculite to your Acme, Texas plant for use as aggregate in your texture products. Recently I discussed with Mr. Sterling Clark the possibility of using a delaminated expanded vermiculite that we manufacture in joint compounds as a substitute for the asbestos fibers now being used. He recommended that we furnish samples to you for test and development work.

We are sending to you, by parcel post, samples of the following:

Delaminated vermiculite - Grade I
Delaminated vermiculite - Grade II
Micron vermiculite

We can furnish additional samples if you desire, and we will appreciate your comments on the use of these materials.

Sincerely yours,

STRONG-LITE PRODUCTS, INC
