Subject MEDICAL CONTACT FOR CONOCO CHEMICALS

CONFIDENTIAL

Although an informal relationship between Conoco Chemicals Company and the Medical Division has served us well in the past, the growing volume and complexity of medical problems facing our industry, coupled with the diverse nature of our plant operations, leads me to believe that we should establish a more definitive relationship between Conoco Chemicals and your division.

I'd like to request that you consider designating a physician on your staff to act as primary contact for Conoco Chemicals. Such an arrangement would have a number of advantages for both organizations.

One physician would have the time to become thoroughly familiar with our unique operations and health problems, rather than requiring all members of your staff to do so. In addition to this more thorough technical understanding of Chemicals, a primary contact physician could develop a closer personal working relationship with key people in our division. The obvious advantage for us would be that we could give our people one name to contact for advice and assistance.

I'd be happy to discuss this matter with you at your convenience.
