CP replied that the Chemical strategy will be the ‘game changer’ for the coming five years. It is (for the time being) planned for the adoption for 14 October 2020. CP advised to avoid contacting other people at this very late stage of the finalisation of the Chemical Strategy but encouraged to take contact with the Commission after the publication of the Strategy and reminded that Commissioner Breton wrote recently a number of articles on the competitiveness of the European industry and trade relationships with third countries.
