COPY

Gentlemen:

On May 10, 1960 we conducted a survey of your asbestos brake lining and forming operations to determine whether these operations were creating a health hazard and checked the amount of production taking place in each case.

It was found that the brake lining operation was still in the pilot plant phase and experimentation was still being conducted on the forming line. At this time it did not appear to be a health hazard; however, when these processes are conducted full time, improved ventilation will be necessary and samples should be taken to evaluate the hazard more completely. When the plans are available for the production process for the brake lining, we would appreciate being able to check over the ventilation provided.

If we can be of assistance before this time, please feel free to call on us.

Very truly yours,

DIVISION OF OCCUPATIONAL HEALTH

Marvin M. Schuman
District Engineer
