Subject OS-95

The field evaluation of OS-95 is underway and if everything proceeds satisfactorily, OS-95 could become a sales item by the first of the year.

As you know, we have a limited amount of toxicological data on this product that were performed by Fred Younger. The reason for this memo is to make sure that we do not launch another sales product with insufficient toxicological information. Therefore, do you feel that the data we have are sufficient? If not, what additional tests would you like to see performed, and can you give us an idea of the cost and how long they would take?
