Dear

At the request of Mary Valenta, I am providing the following information for Vista LPA solvent

Based on the analytical data we have available, neither product contains more than 0.1 percent total polynuclear aromatics (PNA). Therefore, there are no OSHA-defined carcinogenic PNA's above 0.1 percent in either product. Furthermore, the manufacturing processes for these products should preclude the presence of other OSHA-identified carcinogens.

Based on the above, Vista LPA solvent
will not require carcinogen warning labels as required in the OSHA Hazard Communication Standard (29 CFR Part 1910.1200 d(4)).

Sincerely,

Research Chemist
