OSHA - ASBESTOS

Items for clarification or changes in OSHA regulations are listed below:

- Asbestos regulations require that medical exams be made available to employees exposed to airborne concentrations of asbestos dust. This should be restricted to asbestos workers and records maintained by the contractor.

- Asbestos regulations also require employees to "monitor every place of employment where asbestos fibers are released in such a way as to determine employee's exposure to asbestos fibers". After these initial surveys, the samples "shall be of such frequency and pattern as to represent the levels of exposure to employees".

DUP 0995164

DU 048314

We should increase the frequency and locations of samples to get a reliable cross section of the exposure levels on various materials and jobs, i.e., dismantling, cutting, installation, etc.

- Warning signs conforming with the new Asbestos Standard will be available as a standard wording from M&M Displays, per our price agreement.
