Dear all,
Here is our response from our meeting as agreed.

We have identified our use of Pfas in three main parts.

One in readymade garments that we purchase:

- In some winter garments, Hi-Vis garments etc. where the Pfas is used to achieve an water and stain resistant effect. Alternative methods are available and we are working on replacing these article for article.
- PPE garments Chemical Splash SS EN 13034.

Garments that we produce. For those we purchase ready made material that complies with the requirements, i.e. mostly material for garments to be certified according to SS EN 13034.

Reimpregnation of PPE garments Chemical Splash SS EN 13034, during the full life of the garments.

Please find our reply to the questions in attached document.

Med vänlig hälsning/Best regards

Malin Hill

Meeting on use of PFAS in PPE

The competent authorities for REACH of the Netherlands, Germany, Denmark, Sweden and Norway are currently preparing a REACH Annex XV Restriction Dossier for the group of PFAS (per- and polyfluoroalkyl substances). You can find more information on the ECHA webpage: [Registry of restriction intentions until outcome - ECHA \(europa.eu\)](https://echa.europa.eu/en/registry-of-restriction-intentions-until-outcome).

The Swedish Chemicals Agency (KEMI) is responsible for the use in TULAC (textiles, upholstery, leather, apparel and carpets). As part of working on that we have identified a need for more information on the use in protective clothing. Attached you find an updated agenda for the meeting with questions we would like to discuss with you.

We also welcome written answers to the questions as it ensures that we receive all relevant information and that the information is documented in the best way. Of course, we can also handle confidential information and will not share such information without your permission. If possible please send the answers before the meeting. Otherwise you may send it afterwards.

Looking forward to a fruitful discussion.

Best regards

Jenny
