Dear Bob:

Re: Gasoline Stoves

It has been called to my attention that the use of gasoline stoves is likely to increase both because the GI's have been used to the stoves and because some manufacturers advertise that their appliance will operate on leaded gasoline. As you know, some of these, such as campstoves and gasoline lanterns are likely to be operated in small and poorly ventilated quarters, such as tents. I am wondering whether you have information on hand regarding the lead hazard under those conditions, or whether you think you or I should get additional data.

Very truly yours,

George Calingaert
