American Standard

Registered United States Patent Office

An American Standard implies a consensus of those substantially concerned with its scope and provisions. An American Standard is intended as a guide to aid the manufacturer, the consumer, and the general public. The existence of an American Standard does not in any respect preclude anyone, whether he has approved the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standard. American Standards are subject to periodic review and users are cautioned to obtain the latest editions. Producers of goods made in conformity with an American Standard are encouraged to state on their own responsibility in advertising, promotion material, or on tags or labels, that the goods are produced in conformity with particular American Standards.

Foreword

(This Foreword is not a part of American Standard Specifications to Minimize Hazards to Children from Residual Surface Coating Materials, Z66.1-1964.)

ASA Sectional Committee on Prevention or Control of Hazards to Children, Z66, was organized in 1953 by the American Standards Association, under the sponsorship of the American Academy of Pediatrics.

The purpose of this committee's activity is to develop specifications, tests, and procedures to minimize home hazards to children which might result in physical injury or poisoning.

Toward this end a subcommittee was appointed to deal with the identification or labeling of paint products to indicate that they are safe to use in painting objects or surfaces which might be ingested by children.

In view of the scope and objectives of the work of the Z66 Sectional Committee and of this subcommittee, the consideration of the subject was limited to the potential hazards to children such as might come from the handling and use of painted articles. Here the hazard would be from toxicity of coatings ingested. Study of this problem was suggested because of a number of reports of cases of lead poisoning in children as a result of swallowing dried lead paint, chewed off from various surfaces to which the child had access. Such surfaces were, predominantly, painted interior woodwork.

This standard therefore deals with the toxicity hazards which may be encountered through the ingestion of dried coatings on articles or surfaces accessible to children.

ASA Sectional Committee Z66, which reviewed and approved this standard, had the following personnel at the time of approval:

DR EDWARD PRESS, Chairman

LAWRENCE A. CARVEY, Secretary

<i>Organization Represented</i>	<i>Name of Representation and Business Affiliation</i>
American Academy of Pediatrics	DR EDWARD PRESS, Illinois Department of Public Health
American Association of University Women	DR SAMUEL SOUTHWARD
American Home Economics Association	KATHERINE ARNOT WELLS
American Hospital Association	CLAUDE C. FREEMAN
American Petroleum Institute	PETER B. TERNER, The Roosevelt Hospital
American Public Health Association	SAMUEL WHITE, JR., American Hospital Association
American Society of Safety Engineers	J. R. NOBLE
American Society for Testing and Materials	<i>Representation Vacant</i>
Association of Cannery and Sundry Companies	J. T. WARRING, Richmond Area Safety Council
Child Study Association of America	THOMAS J. BEEK, Metropolitan Insurance Company (Alt)
Good Housekeeping Institute	CATHERINE A. BAKER, Better Fabric Testing Bureau
Industrial Medical Association	CARL F. OLANDER, The American Insurance Company
Institute for Safer Living	A. D. BUCHHEIM
Lead Industries Association	ROGER G. COOK
National League for Nursing	DR FREDERICK SHELTON, Ohio State University
National Paint, Varnish and Lacquer Association	DR JOHN POSTER
National Safety Council	MARY HELEN RICHTER, American Mutual Liability Insurance Company
National Society for Crippled Children and Adults	L. P. BLOCHER, American Mutual Liability Insurance Company (Alt)
Parents' Magazine Consumer Service Bureau	DON G. FOWLER
Toy Guidance Council	R. L. ZIMMEL (Alt)
Toy Manufacturers of the USA	DR HELEN M. WALLACE, University of California
U. S. Department of Commerce, National Bureau of Standards	MARGARET LOTY, New York City Health Department (Alt)
U. S. Department of Health, Education and Welfare, Children's Bureau	R. J. ECKART, Sapolin Paints
	D. S. RINE (Alt)
	RICHARD MANFULL
	PERL DYER (Alt)
	ELIZABETH M. WAGNER
	ESTHER McCABE
	DOROTHY REEFER (Alt)
	ARNOLD R. BOLKA
	LEOLA SCHWY, Columbia University (Alt)
	STUART HOOVER
	DR GRACE LARSON (Alt)
	F. T. HOWARD
	M. W. SANDERSON (Alt)
	DR PAULINE G. STITT

Organizations Represented

U. S. Department of Health, Education and Welfare,
Food and Drug Administration (Liaison)
U. S. Department of Labor, Bureau of Labor Standards
U. S. Public Health Service, Department of Health,
Education and Welfare (Liaison)

Name of Representative and Business Affiliation

Representation Vacant
CLYDE P. SMITH
HENRY L. VERNHULT
EUGENE L. LAMB (Alt)

The Z66.1 Subcommittee which prepared this standard had the following personnel:

R. J. ECKHART, Chairman
Sapolin Paints

DOV G. FOWLER, Secretary
Lead Industries Association

DR CHARLES ASHES
MYRON E. AYERHILL
Hercules Powder Company
DR JOHN H. FOULGER
R. H. HIGGINS
Benjamin Moore and Company
STUART HOOVER
Toy Manufacturers of the USA
P. T. HOWARD
U.S. Department of Commerce,
National Bureau of Standards
WILLIAM H. LOTS
Finn & Lambert, Inc
CHARLES R. MARTENS
Sherwin Williams Company
DR MAY MAYERS

DR SAM MOLINAS
U.S. Department of Health, Education and Welfare,
Food and Drug Administration
DR THOMAS W. NALS
Union Carbide Corporation
HENRY RAYNES
New York City Health Department
DANIEL S. RING
National Paint, Varnish and Lacquer Association
LEO SILVERSTEIN
DALLAS SPANNE
E. I. duPont de Nemours & Company
HENRY L. VERNHULT
U.S. Public Health Service,
Department of Health, Education and Welfare
HENRY J. WETSON
National Lead Company

**American Standard Specifications to
Minimize Hazards to Children from
Residual Surface Coating Materials**

1. Scope and Purpose

This standard specifies the requirements for coatings such as paints, enamels, lacquers, etc., applied in liquid form, that are deemed suitable from a health standpoint to be used to paint children's toys or furniture or interior surfaces so that the danger of poisoning will be minimized if, by chance, some of the dry coating should be ingested by a child.

2. Specifications

A liquid coating material to be deemed suitable, from a health standpoint, for use on articles such as furniture, toys, etc., or for interior use in dwelling units where the dry film might be ingested by children:

(1) Shall not contain lead compounds of which the lead content (calculated as Pb) is in excess of one per-

cent of the total weight of the contained solids (including pigments, film solids, and driers);

(2) Shall not contain compounds of antimony, arsenic, cadmium, mercury, or selenium of which the metal content individually or in total (calculated as Sb, As, Cd, Hg, Se, respectively) is in excess of 0.06 percent by weight of the contained solids (including pigments, film solids, and driers);

(3) Shall not contain barium compounds of which the water soluble barium (calculated as Ba) is in excess of one percent of the total barium in such coatings.

3. Marking

Coatings complying with this standard may be marked:
"Conforms to American Standard Z66.1-1964 for use on surfaces which might be chewed by children."

NOTE: Suggested test methods for low concentrations of lead in paint and for the determination of low quantities of mercury in paint are contained in the following ASTM Standards (copies available from American Society for Testing and Materials, 1916 Race Street, Philadelphia, Pa.):

Tentative Method for Determination of Low Concentrations of Lead in Paint, ASTM D 2089-62 T

Tentative Method for Determination of Low Quantities of Mercury in Paint, ASTM D 2206-63 T

Approved 4-29-64

American Standards

The standard in this booklet is one of over 2000 standards approved to date by the American Standards Association, Incorporated.

The ASA provides the machinery for creating voluntary standards. It serves to eliminate duplication of standards activities and to weld conflicting standards into single, nationally accepted standards under the designation "American Standard."

Each standard represents general agreement among maker, seller, and user groups as to the best current practice with regard to some specific problem. Thus the completed standards cut across the whole fabric of production, distribution, and consumption of goods and services. Manufacturers, consumers, technical organizations, and governmental agencies — all substantially interested and affected groups — are represented on the committees which develop and regularly revise American Standards. The completed standards are used widely by industry and commerce and often by municipal, state, and federal governments.

The ASA, under whose auspices this work is being done, is the American clearinghouse for standards activity on the national level. Founded in 1918, it is a federation of more than 100 trade associations, technical societies, professional groups, and consumer organizations. Some 2200 companies are affiliated with the ASA as company members.

ASA is the United States member of the International Organization for Standardization (ISO). Through this channel American industry makes its position felt on the international level. American Standards are on file in the libraries of the national standards bodies of more than 40 countries.
