ETHYL CORPORATION

INTER-OFFICE
CORRESPONDENCE

TO	William E. Rinehart, Sc. D.	ADDRESS	New Orleans
FROM	J. G. Burdick, M.D.	ADDRESS	Houston
SUBJECT	Cutting of Asbestos Insulation	DATE	August 29, 1968

Mr. Lowe tells me that the total time spent cutting insulation with power saws at this plant will probably average two man days a month in the shop (mostly on the band saw) and one day a month in the field (on the job site). This is an approximate average. During some months the time spent may be four or five man days and during other months, no cutting will be done.

The present plan is that cutting asbestos insulation with power saws will not be resumed until we get some opinion from you as to the potential for harm.

J. G. Burdick, M.D.
