CONFIDENTIAL

Dr. E. M. Leonhardt
QUEENY PLANT

The following men have been listed in our Cancer Index as having had carcinoma of the lung. The number after their name denotes the year they were reported to us. Can you check to see if any of these men were insulators, as we are interested in the connection between asbestos exposure and carcinoma of the lung. If it is not too much trouble, could you give me a work history of their various departments.

This certainly should be done discreetly, as we do not anticipate any problem and don't want to stir up trouble. It is, however, important that we know whether or not there was a significant contact of these people with asbestos.

Wilford Neil	1965
Henry Miller	1964
