Ray Gettelfinger, one of the Louisville employees who had been under treatment for angiosarcoma of the liver, died Tuesday night. Following is the text of the material the Louisville Plant management will use to respond to any inquiries from the news media:

"Raymond P. Gettelfinger, a 20-year employee of the B.F.Goodrich Chemical Company plant in Louisville, Kentucky, died Tuesday night. He had been under treatment for angiosarcoma of the liver.

Gettelfinger, who was 43 years old, had worked in the plant's polyvinyl chloride (PVC) operations for virtually all his company service. He became ill in February, 1974, and was furloughed home from work at that time."

You should confine your responses to the above in the event of questions from employees or the news media.

Bob Rylands is making the following announcement
to the Avon Lake plant employees early this
afternoon:

"It is with regret that I inform you that
one of our employees has been diagnosed
as having angiosarcoma of the liver. The
employee is still hospitalized. He has
21 years of plant service, of which the
first 13 were in PVC operations and the
last 8 in Estol, plasticizer and Carboset
operations."

You are free to communicate the same information
to your employees if you believe this is desirable.
