AROCLOL FOR TOXICOLOGICAL STUDIES

E. S. Tucker - Res. 2 *811-3439 - "Jerry"*

S. Second Street

Dr. Glasgow, Dept. of Interior, called requesting
1 pound samples of Aroclor 1254 and Aroclor 1260 for
toxicological testing, presumably in mice and rats.

The samples should be sent to:

Mr. Vincent Sedlak
Food & Drug Administration
Bureau of Science
Atlanta Toxicological Branch
4770 Buford Highway
Chamblee, Georgia 30341

This work is to be headed by Wm. F. Barthel - Chief
of Toxicology.

1 pound samples of Aroclor 1254 and 1260 should also be sent
to:

Dr. A. R. Glasgow
Chief of Reference Standards Section
Residue Chemistry Branch
Div. of Pesticides
Food & Drug Adm.
Wash., D. C. 20204

E. Wheeler suggests that we use Aroclor from the same
experiments as our long term feeding studies.

The latter samples are to be used by Dr. Claire Williams
working for Dr. Fishback- Dir. of Pesticides. Pre-
sumably Dr. Williams will run acute toxicity in rats.

Dr. Glasgow suggested that he would help in establishing
contact between Mr. Jack Early of our Washington office
and the principal investigators to give us first-hand
information on the results.
