FDA STATUS - 752-AL765

As long as 752-AL765 is used only to coat iced-tea spoons for in home use, no formal FDA approval is required. However, we would want to obtain an opinion from Haskell Laboratory on the safety of the coating before using it for this food contact purpose.

Since the subject formula contains about 0.01% lead as drier and two pigments (Watchung Red and Orange YT-582-D) which are not approved for food contact use, some reformulation would probably be necessary before Haskell approval could be obtained.
