NOVATEX®

A NEW STANDARD IN PROTECTIVE CLOTHING

Novatex is a new class of asbestos textile developed by Raybestos-Manhattan. Novatex conforms to ASTM Grade AAAA (99 to 100% asbestos content).

The following is a physical properties comparison of Novatex to Asbestos:

	<u>Novatex</u>	<u>Asbestos</u>
Wt./Sq. Yd:	1.00 lb.	2.25 lb.
Thickness:	.050"	.060"
Grade:	AAAA (no organic fibers)	Underwriters
Abrasion (Cycles):	175	140
Recommended Temperature:	900° F	450° F

Novatex is particularly suitable for use in protective clothing, gloves, welding blankets, safety curtains and wherever protection against high temperature hazards is required.

Novatex offers complete protection from direct flame and reflected heat.

At extreme heats, Novatex retains a higher percentage of the original tensile strength than glass fabrics of similar construction.

The special processing treatment of Novatex provides extreme flexibility and virtually eliminates quality degradation due to moisture and chemicals.

Workers will wear their garments a greater percentage of the time and will be less subject to fatigue wearing a lightweight Novatex garment.
