brake work projects.

Q Now, I think you testified that after you drafted the protocol and after the test was done, you then talked to somebody who had done brake work, correct?

A That is correct.

Q Who was that person again?

A He was a high school student who is taking a technical course, in the technical section. And we were talking about brakes, and I had mentioned that we had done this test.

And I asked him, do you get involved in sanding or grooving brakes?

And he said, oh, yes, we do that. And he said, now, when you are dealing with asbestos brakes, we have special equipment that we have to put around the brakes and so on. But new brakes they do -- he said sometimes we are even asked to drill holes in the brakes for squealing or various other reasons.

Q Let me ask you this.

You were deposed on last Friday, correct?
