Phil,

The one suggestion I have is that given you have listed TSCA, is to have a generic regulatory listing by country/region for chemical inventories rather than TSCA by itself. For example, you could list Australia with a link to NICNAS, US with link to TSCA, Canada with link to DSL/NDSL, etc. That way it provides one stop shopping with nice links to relevant info. If we do this I suggest we designate someone from one of our teams to draft (PRS regional team seems most likely candidate).

I note you also listed the Shanghai Benzene Study. That has confused me a bit as to intent of the site. Most of the info seems focused on regulatory programs/requirements rather than issue related. My preference in this case would be to have an general overview issue management item and then link to specifics such as the Benzene study, Used Oil/RRBO, etc.

Jeff

Gentlemen,

I am working with T. Colangelo to make the DS Product Stewardship website look fit for purpose. I'd like to add a link to a glossary of terms and popular things. See this starter doc. I'm looking for a few minutes (time to drink a cup of coffee) to identify some items from your side of the portfolio which should be included. If uncertain if something is "in" or "out" it is out for now. I glued in what I had readily available and will work the wording. The audience - is the PS community and any one who hits the site from the business or hse community.

Appreciate your input.

Phil Snyder
