ASBESTOS

I understand asbestos gaskets are used in the AOP converter baskets. They are cut from sheet material by Mechanical. We should make every effort to find an acceptable alternate gasket material. This and other sources of asbestos should not be introduced on the Plant. If you cannot find alternates, please have the job checked for worker asbestos exposure.

~~Your opinion please!~~ - JMC

We are considering alternate materials in conjunction with new basket design. However, this is at least a year off.
(How do we proceed to check exposure in the meantime?)
