and his associates found two to 15 percent chrysotile in all 10 samples of the brake wear dust?

A Two to 15 percent?

Could I see that particular document?

Q Sure, by all means. This is Plaintiff's Exhibit Ford 83. I have highlighted down here at the bottom of the page.

(Whereupon, document tendered to witness.)

A Yes, I am familiar with that number.

Q Would it also be fair to say that they wrote in their paper that exposures from beveling and grinding would be even higher?

A They made some statements along those lines.

Q In both the Lorimer and Rohl studies presented by Mount Sinai, is it not true they both concluded that immediate precautionary measures were necessary?

A They definitely provided that sort of a message, yes.

Q And I think the Lorimer study said control
