Dear David:

I enjoyed seeing you and Bill last week and hope we can repeat the tennis soon. I also appreciated your willingness to spend the time helping us.

As a result of our discussions there were a few things I wanted to follow up on. We are very interested in whether or not Bill has been able to find some cost reduction possibilities for 1489. I am also interested if you have been able to learn any more about the metallized polypropylene situation from GE or others.

We would also appreciate having the dissipation factor curves for the high dielectric constant 1238 and the new article you mentioned trichlorodibenzofurane.

Thank you very much.

Sincerely yours,

ELECTRICAL UTILITIES COMPANY
