

IN CHEMICAL PLANT SERVICE . . .

HOMOGENEOUS . . .

lead lined tanks for corrosive liquors

The National Lead Co. also sells "United Tubular" chemical lead lined pipe, "United" lead lined fittings and "United" lead lined valves, for handling dilute sulphuric, sulphurous and other acids, mine and salt water, etc., as well as "United" Hardened fittings, valves, cocks and pumps.

Homogeneous chemical lead lined tanks and other equipment, such as agitators and kettles, help the chemical industry to reduce upkeep and replacement costs.

This equipment is extremely durable and long-lived, because:

1. Its chemical lead lining is highly resistant to sulphuric and allied acids.
2. The union between steel shells and lead linings is so perfect that linings and shells are inseparable even under vacuum, pressure and temperature variations up to within a few degrees of the melting point of the lead itself.

The chemical industry has adopted Homogeneous lead lined equipment because experience has shown that it gives trouble-free service where corrosive liquors are an ever present problem.
