Subject: FW: Preliminary results for PFOA at Washington County Landfill

Bruce, found this email message after talking to Pat. Apparently PFOA was also found. The HBV for PFOA is 7 ug/l. Dave

I talk to Paul Swedenborg (the supervisor at the MDH lab) this morning. Paul told me that your samples showed detectable concentration PFOS and PFOA. According to him one of your samples had 49 (ppt of ppb?) PFOA!

I would like to talk to you further and learn more about your data. Thanks for keeping us informed. Fardin

FYI,

PFOA has been detected in some downgradient wells at Washington County Landfill and was not detected in the control well. I do not have the complete data set but have a call into MDH to get the rest of the data. A reporter has contacted me so I need to contact them next week. I see a confirmation analysis as well as sampling of residential wells. I will keep you updated.
