Manufacturers of BUCKEYE Heating and Ventilating and Air Conditioning Apparatus

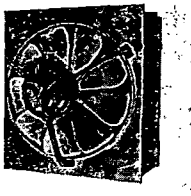

The Buckeye Heatovent has been developed for use in School Rooms and other places where quiet running, temperature control, quick heating and positive ventilation are requisites. This machine is equipped with the **Buckeye** flat tube all copper radiator which freezing does not harm. Air Deliveries from 600 to 1500 C.F.M. Ask for Bulletins 124 and 126.

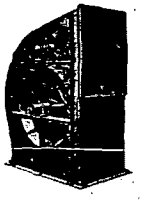

The Type "F" Buckeye Thermovent for installations, requiring larger heating and air capacities, such as Public Garages, Factories, Terminal and Storage Warehouses. Horizontal Models for ceiling suspension, Vertical Models for floor installation. Made in both Fresh Air and Recirculating Styles. 2000 to 6500 C.F.M. Ask for Data Book No. 127.

The Type "E" Buckeye Thermovent a Unit Ventilator and Heater for Auditoriums, Churches, etc., where quiet operation is essential. Made in Fresh Air and Recirculating Style, in both Horizontal and Vertical Models. 2000 to 4000 C.F.M. Ask for Data Book No. 129.

The Buckeye Giant Unit Heater was especially designed and developed for Airplane Hangar and high roof Industrial Building Heating. Capacities up to 20,000 c.f.m. and 2,760,000 B.t.u. Ask for Buckeye Giant Data Broadside.

The Buckeye Thermofan is a propeller fan type of unit for smaller industrial work-rooms. Can be used for fresh air supply or recirculating jobs, equipped with or without ducts to floor. Ask for Bulletin No. 161.

Multiblade Fans for heating, ventilating, drying, dust removal and allied uses in all sizes up to 100,000 c.f.m. and up to 6 in. static pressure. Ask for Bulletin 833.

Ozonation available for all unit applications. Engineering service available in all branch offices.

Complete line manufactured in Canada by: CANADIAN BLOWER & FORGE CO., LTD., Kitchener, Ontario

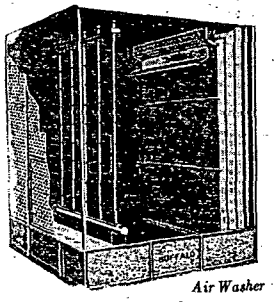

"Highboy"

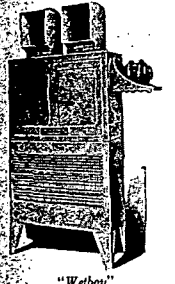

Unit Heaters—Buffalo units made for either steam or gas connections, have distinct advantages not found in other unit heaters.

The Highboy and Lowboy are available in three different lengths, two heights and can be placed vertically or horizontally. Every part of these heaters is accessible for inspection.

"Wetboy"—The wetboy will wash and moisten the air in addition to heating it.

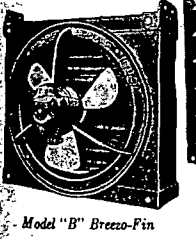

Air Washer

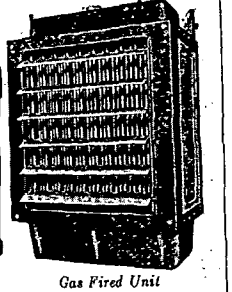

"Wetboy"

Model "B" Breezo-Fin—The Model "B" Breezo-Fin has an improved fan design that delivers a larger volume of heated air with less power consumption. Excellent for suspension from ceiling or wall bracket

Model "B" Breezo-Fin

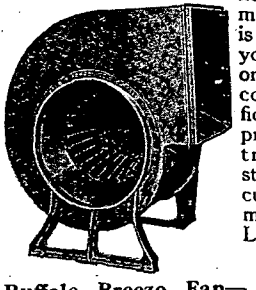

Gas Fired Unit

The Gas Fired Unit—The Gas Fired Unit has many features, including automatic safety devices. It will admirably act as a booster unit to assist your present heating system, take care of new additions —cold corners.

Air Washers—Buffalo Air Washers outstanding features are: eliminators in one piece and demountable; spray nozzles nonclogging; flooding nozzles guarantee wet scrubbing surfaces; suction screen extends entire width of tank; maximum contact between air and water spray.

Silex Conoidal Fans—An improved type of ventilating fan, designed from our experiments and experience to reduce audible noise to a minimum. The cone is carried out beyond casing in order to get best conversion efficiency, and to provide an extremely quiet stream line fan cut off. Also made in "Limit Load" type.

Buffalo Breezo Fan—For all exhausting and ventilating service where no duct work is required. Made in six sizes. All-steel construction, with fully-enclosed self-lubricating motors.
