Dutch Boy VARNISH STAINS

23-39 WALNUT

23-44 OAK

23-34 DARK OAK

produce a finished effect in one application - stain and varnish combined - on old wood surfaces that need restoring. This time-saving, work-saving product restores the effects of time and wear with a shiny new coat - makes old furniture and woodwork like new again.

Dutch Boy Varnish Stains simulate the color of expensive woods, like mahogany and walnut, without losing the beauty of the natural wood grain over which it's applied. It's particularly easy to use - brushes on evenly, levels out naturally to a smooth rich finish. It sets in a few hours and dries to a hard surface overnight.

Use Dutch Boy Varnish Stains for floors, furniture, woodwork - any previously finished interior wood surface that needs new beauty and rugged protection against staining and wear.

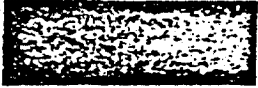

Dutch Boy OIL WOOD STAINS

23-37 WALNUT

23-43 OAK

23-82 SILVERTONE

are ideal for use on unfinished wood. Hard or soft. These stains, true to color, emphasize the grain markings and bring out the full natural beauty of the wood. At the same time, the stains will even up the color of the wood and, if desired, change the color to simulate that of another wood, particularly the more expensive varieties such as mahogany and walnut.

Dutch Boy Oil Wood Stains are deeply penetrating and permanent. The colors neither fade nor bleed... do not warp the grain of the wood.

IMPORTANT: Wash dishes to color and in the case they accept them. After the length of time they are allowed to stand, observe the finished color. The chips shown here represent the color to be expected over light colored woods such as birch or white pine. Varnishing, or tanning, will deepen and even in the color.
