

illustrate, the Department of Energy recently released a new report indicating that domestic energy usage (and therefore demand) from data centers is expected to double, or even triple, by 2028. The power sector also continues to break daily peak load records due to extreme weather events and generation shifting. In sum, there is significant demand for electricity and a concomitant need to reinforce system reliability and capacity.

Conclusion

For the foregoing reasons Colver respectfully requests a two-year Presidential exemption from compliance with the MATS Rule for Colver Green Energy.

Sincerely,

Mark Crawford
Environmental Manager
