In your memo of June 27 you asked for my certification that all unsold worldwide inventories of Monsanto products containing PCB's or PCT's are accounted for. You further indicated that disposal should be or will be made in a manner which will preclude any environmental contamination or exposure to humans or domestic animals.

In this situation the word "certify" is rather strong, but we have taken all known precautions to be positive that no shipments are made after the agreed-on deadlines. Even though we have had many written and verbal communications with all domestic plants and warehouses and all foreign Monsanto locations, we have followed with a final communique to again remind all locations of this limitation. In addition, each location has been advised of disposition of any remaining inventory to avoid any environmental or other contamination.

I am sure in my own mind that this situation is well in hand and that no incidents will develop.
