Subject: Wash Works Modeling

Cathie,

Not as easy as I thought it would be. To make a long story short - I have to make 2 modeling runs and somehow merge the results. Hopefully, I'll have something by Monday, although not as confident as yesterday.

Regards,

Charlie Z.

Subject: WW Depletion Modeling

Cathie,

The modeling results are in - and they are the same as previous modeling results for all practical purposes. The maximum predicted concentration for 2002 actuals at the property line is still 1.36 ug/m3. There are differences at the fourth decimal place. The travel distance is so short that plume depletion doesn't matter. Also, the particle sizes are very small, so it takes awhile for them to settle out.

Oh, well.

Charlie Z.
