R. A. Kehoe, M. D.
Director, Kettering Laboratory
of Applied Physiology
College of Medicine
University of Cincinnati
Cincinnati Ohio

Dear Doctor Kehoe:

This letter is to inquire whether any data has come to your attention on normal values for lead in blood and lead in urine in human infants and small children.

A children's hospital of this city has asked this Bureau to analyze samples in cases of suspected and proven lead encephalitis.

It was my thought that in the course of your investigations you may have arrived at some values for normal and for leaded infants and children.

I shall greatly appreciate any information you may have on this question.

Very truly yours,

Bruce H. Douglas, M. D.
COMMISSIONER
