FROM (NAME & LOCATION) Dept. of Medicine & Environmental Health

DATE: September 9, 1976

cc: Dan Bishop - BIND

SUBJECT: PHONE CALL FROM DAVID BROWN  
OF THE BIOMETRY DIVISION

REFERENCE: OF NIOSH

TO J. Coleman Weber  
B2SK

Dr. David Brown called today concerning our news release on PCB's. He did not ask about our interpretation of melanomas or pancreatic tumors but, rather, our problem of lung cancers in our PCB population. He wanted to know the facts as I saw them.

I told him that our news release was to state that we had no melanomas or pancreatic tumors but that we did have an excess of lung cancers. He seemed satisfied with the facts as I was able to give them. He told me that they have an epidemiology study going at one of the G.E. plants and that he would keep us posted on the study. I told him that we were not finished with the PCB study and that we would be getting back to it after we have completed the Springfield epidemiology study. I told him upon completion of the study we would send a report to NIOSH.

  
George Roush, Jr., M. D.

GR/ln
