RE: ASBESTOS - SOUTH AFRICAN

-*-

Presently in the manufacture of Calcium Silicate we are utilizing an imported South African long-fibered asbestos delivered in Valley Forge at the following prices:

Asbestos W-3	\$227.60/ton
Asbestos S-33/65	\$205.60/ton

Our estimated annual usage of 260 tons of each of these products results in a yearly expenditure of approximately \$113,000.00. Is there a possibility of utilizing cheaper grades of Canadian asbestos as potential substitutes inasmuch as approximately 20 per cent of the laid-down cost in Valley Forge is a combination of ocean and rail freight. For information purposes, a similar quantity of any type of asbestos transported from Thetford Mines, Quebec, Canada, would cost approximately \$9,000.00, or 8 per cent. (Transportation only)

Anthony R. Cucchiaro
Manager of Distribution
