COPY TO F.W. Kanzler
FileSUBJECT MONTHLY PROGRESS REPORT
December, 1971

Production was notified on 12/16/71 of the apparent trends on the following type resins:

<u>Resin Type</u>	<u>Trends</u>
225/16R	Relative viscosity on the high side of mid-range. Dry blend on the low side of mid-range.
250-2	Bulk density on the low side of mid-range.
250-12	Particle size is slightly above mid-range.
314	Relative viscosity on the low side of mid-range.
315	Bulk density on the low side of mid-range. Particle size is slightly below mid-range.
384	Relative viscosity on the high side of mid-range. Particle size on the low side of mid-range. Brabender on the high side of mid-range.
0565 - Plant 8	Relative viscosity on the low side of mid-range.
AR 901	Relative viscosity on the low side of mid-range.

A pallet of Stauffer SCC-40 - 0565 type - dispersion resin was received, sampled and tested during this period for further evaluation of possible purchase of this product in quantity.

A specification review of Plastisol products is scheduled for the first week in January.

COLORITE 015002

Two shipments of Avirol POL-L-N on 12/6/71 and 12/20/71 from Standard Chemical were below minimum on % sulfates. The shipment on 12/20/71 was also below minimum on Brookfield viscosity. A shipment of TCE received on 12/6/71 from American Chemical was below minimum on refractive index. The last few shipments were to the low side of the spec. Corrective Action Requests were submitted to Purchasing for their information and action.
