Mr. L. C. Osineup
The Mowbray Company
Post Office Box 306
Waverly, Iowa

Dear Mr. Osineup:

There is quite a bit of difference between handling a compound and having it as an ingredient to be applied to the skin. I don't think that Aroclor 1254 can be considered a non-toxic resin or, for that matter, a non-toxic plasticizer.

I would hate to see you get started on research and have your time wasted because of either real or alleged dermatological problems. As you know, Aroclors are chlorinated diphenyls and they have been indicted at times as a cause of chloracne.

Very truly yours,

R. Emmet Kelly, M.D.
Medical Director
