PROGRESS REPORT for the week ended May 27, 1949

INDUSTRIAL HYGIENE FOUNDATION Industrial Fellowship No. 259-15

Subjects under which report is to be indexed

A trip was made to Beaver Valley to service the three Trion installations at the St. Joseph Lead Company, and the homes of Mr. Wheaton and Dr. Long.

One hundred and ten samples have been received in the laboratory in less than three months. Most of these have received a preliminary treatment before being sent out for analysis.

The Pittsburgh Plate Glass Company heat data was analyzed and is to be included in the report on dust, sulfur dioxide and heat exposures in their plant.

All Donora and Beaver Valley Trion samples were weighed and calculations made to determine the amount of air-borne dust collected per day.
