I talked with Dr. Eunice Moore on 11/1 of Electric Utilities Company, LaSalle, Illinois, with regard to possible governmental regulations of PCB's to the environment. Electric Utilities is a major customer for Aroclor in the State of Illinois.

Our concern is that the WGK strategy as a producer of Aroclor would not be in conflict with customer strategy within the State.

Dr. Moore stated they can probably meet any proposed regulation with regard to water pollution and this includes getting down to possibly "zero". She does state that residual pockets in the sewer system may contribute to background for some period to come. They have a small effluent stream that discharges to the Illinois River.

Our strategy is not in conflict with Electric Utilities. I told Dr. Moore that we would keep her informed with regard to our future contact with governmental agencies.

Dr. Moore expressed some concern with possible air pollution problems. To my knowledge PCB's will not be considered an air pollutant.
