COPIES: Messrs. W. Hewitts - Construction
 E. C. Koch - Contract Control
 J. P. Winkin - Director of Engineering
 H. Smith - New York Sales
 K. Shearer - Contract Design

SUBJECT: INSULATION

A decision was reached this morning between Public Service and myself on the materials to be used on this job in all areas.

This agreement is that flask blanket will be used overall with three areas of exception: *2 layer glass **

A.. Penthouse will be sprayed.

B. The reheat outlet header at the rear of the boiler will be sprayed.

C. The boiler exit flue will be insulated with calcium silicate block. *2 layer **

Specialty insulation in specific areas for expansion, etc. are already included in the specifications. Mr. Hewitts has been made aware of these decisions and in my absence during the next two (2) weeks, should be your contact for information relating to the insulation of this job in its entirety.
